Find the answers to these questions in cowsay's man page:

• Who wrote the cowsay program?

Tony Monroe

• What is the command line flag to customize the cow's tongue?

-T

NAME

`ls` - list directory contents

SYNOPSIS

`ls` [OPTION]... [FILE]...

DESCRIPTION

List information about the FILES (the current directory by default). Sort entries alphabetically if none of `-cftuvSUX` nor `--sort` is specified.

Mandatory arguments to long options are mandatory for short options too.

-a, --all

do not ignore entries starting with `.`

-A, --almost-all

do not list implied `.` and `..`

Manual page `ls(1)` line 1 (press `h` for help or `q` to quit)

Using the Manual (for serious purpose)

How can you list all the items in a directory, including the ones whose names start with a dot?

```
ls -a
```

but also be correct
if you said `ls --all`.

Which of these pieces of information can you find with `ls -l`? Check all that apply.

- ☒ filename
- ☒ modification time
- ☒ file size
- ☒ is this file or directory?
- ☐ virus scanning status
- ☐ what program is used to open this file?

whether a particular file is a file or a directory.

Researching Commands

Research (but don't run) the command "rm -rf /".

What does it do?

remove files

What do the r and f stand for?

- ☐ read
- ☒ recursive
- ☐ root

- ☒ force
- ☐ file
- ☐ flag

 **Correct!**

`-r` is for recursive, and `-f` is for force.

Just to be clear: This command is not good for your system. Don't run it. Keep watching ...
